

iDevelop

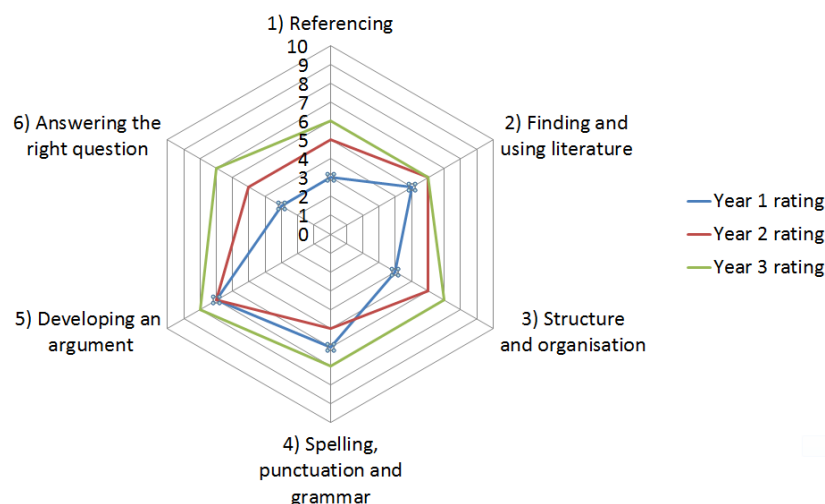

iDevelop is a tool that has been created by Jon Painter and Sharon Frankland in HWB which helps students draw together individual pieces of feedback to give an overall picture of their academic development.

The tool is primarily used to give a visual representation of a student's development in the areas of:

- Referencing
- Finding/using literature
- Structure and organisation of assessments
- Spelling, punctuation and grammar
- Developing an argument
- Answering the right question

The tool provides a visual overview of a student's current abilities that can help them understand where they may need to focus their efforts. The overall aim is for students to become a well-rounded academic writer by the end of their studies.

Self-assessment of academic development

To access the tool please use the following link:
