

AFHEA Practice Example - Technical Role

A1	Design and plan learning activities and/or programmes of study	<p>I was asked to develop a practical that could achieve learning outcomes (Biggs 1996) of demonstrating XXXX. The constraints I had to consider were that it be deliverable to a full class of 20-30 students and within a timescale be reproducible and that all students of differing abilities could take part. I considered a number of options and using both my experience and references to XXX XXXX literature found two XXXX which could be used as a model through making sections and staining. I showed my results and findings to the academic who used this to write a new practical which was delivered to the level 5 students successfully. I know it was successful as student groups were able to get positive staining results.</p> <p>Word Count: 126</p>
